

For the first question, you need to include “**db.php**” file to be able to use \$people array. The css file, “**app.css**” contains hints about styles for q1 and q2. To understand what you are supposed to do, “watch the given video files, **q1.mp4** and **q2.mp4** under video folder.”

Q1. Write a php program that shows the current people and their favorites, Fig1. The user can select his/her own favorites by clicking the emoji of the person. It adds the clicked person to the list at the top, and changes the background color of the selected row to #DDD, and the user cannot select the same person again. After the list, there is a “reset” button/link, to delete all selections.

My Favorites : { }

RESET

Emoji	ID	Fullname	Favorites
	123	Kenan Doğan	{   }
	124	Murat Langer	{  }
	125	Emre Songür	{    }
	126	Eray Akkaya	{  }
	127	Umur Aras	{  }
	128	Burak Aslan	{   }
	129	Fatih Şen	{  }
